Powering Field Impact Through Data & AI

Complete User Manual

Version 1.0 | May 2026

For all users: Field Staff, Managers & Administrators

Dashboard & Analytics

AI Report Generation

WhatsApp Platform

Flow Builder

Content Hub

User Management

Role

Determines what a user can see and do: Employee < Manager < Admin < Superadmin.

2. Getting Started

2.1 Logging In

FieldFlow uses Google or email-based authentication via Firebase. Your administrator will share your login credentials or invite you by email.

1. Open your browser and go to your organisation's FieldFlow URL.
2. Click **Sign in with Google** or enter your email and password.
3. If this is your first login, you may be prompted to set a new password.
4. You will land on the **Overview dashboard** after a successful login.

■ If you see "Not configured — go to Settings", ask your Admin to complete the WhatsApp setup. Your dashboard will still work normally.

2.2 Navigation

The main navigation is a **left sidebar** that lists all tabs you have access to. Tabs shown depend on your role and what your administrator has enabled.

Tab	Icon	Who Can See It	Purpose
Overview	■	All roles	Dashboard KPIs, charts, recent activity
Reports	■	All roles	Full list of field reports with filters
Media	■■	All roles	Photo gallery from field attachments
Impact	■	Manager, Admin	Theory of Change and outcome analysis
ToC Analysis	■	Manager, Admin	Detailed Theory of Change mapping
Analytics	■	All roles	Worker performance and team leaderboards
Notebook	■	All roles	AI research workspace with sources and chat
WhatsApp	■	Admin only	Full WhatsApp Business Platform management
Settings	■■	Admin only	Organisation configuration and user management

2.3 Applying Filters

A universal **filter bar** at the top of the dashboard applies to the Overview, Reports, Media, Impact, and Notebook tabs simultaneously.

Filter	Type	What It Does
Project	Multi-select	Show only data from the selected project(s)
State	Multi-select	Limit to one or more states
Area of Intervention	Multi-select	Filter by programme category (e.g. Livelihoods, Health)
Worker Name	Multi-select	Show only reports by selected team members
Date Range	Date picker	From / To — filters all metrics to that period

■ *Filters persist within your session. Refresh the page or click "Clear Filters" to reset.*

3. Overview Dashboard

The Overview is your daily command centre. It updates in real time as field reports come in and gives you an instant picture of field activity, beneficiary reach, and data quality.

3.1 Hero Stat Cards

Card	What It Shows	Colour
Field Reports	Total reports in the selected filter period vs. all available, with % completion	Purple
Outreach	Sum of beneficiaries reached — the most important impact number	Green
Projects	Count of distinct projects with at least one report in the period	Blue
States	Geographic spread — unique states with field activity	Indigo
Photos	Reports with image attachments (indicator of documentation quality)	Amber

3.2 14-Day Activity Chart

A dual-bar chart shows the last 14 calendar days. Dark bars = number of field reports. Green bars = total beneficiaries. Hover over any bar to see the exact count and date.

3.3 Operational Health KPIs

KPI	Formula	Green Threshold
Data Collection Rate	Days with ≥ 1 report $\div$ total days in period	$\geq 80\%$
Avg Beneficiaries/Report	Total beneficiaries $\div$ total reports	—
Active Contributor Rate	Unique submitters in period $\div$ total known staff	$\geq 70\%$
Top Project	Project with the most reports in the period	—

3.4 Data Quality Scorecard

Colour-coded bars show the quality of your incoming field data:

Metric	Definition	■ Good	■ Fair	■ Poor
Photo Coverage	% of reports with an image attached	$\geq 80\%$	50–79 %	$< 50\%$

Metric	Definition	■ Good	■ Fair	■ Poor
Description Completeness	% of reports with description $\geq$ 30 characters	$\geq$ 80 %	50–79 %	< 50 %
Contributor Consistency	% of last-week contributors active this week	$\geq$ 80 %	50–79 %	< 50 %

3.5 Top Contributors Leaderboard

Visible to Managers and Admins. Shows the top 6 field staff by report count for the current filter period, with total outreach figures. Gold/Silver/Bronze medals are awarded to the top 3.

3.6 Recent Activity Feed

The bottom section shows the 6 most recent field entries with: contributor name, state, project, description snippet, beneficiary count, photo indicator, and date. Click any entry to open the full report.

4. Field Reports

The Reports tab lists every field report that matches your current filters. Each card shows the core data fields submitted by the field worker.

4.1 Report Card Fields

Field	Description
Worker Name & Phone	Who submitted the report (linked to their user profile)
Timestamp	Date and time of submission
Project	Which programme this report belongs to
State	Geographic state where the activity took place
Area of Intervention	Type of work (e.g. Training, Survey, Meeting, Distribution)
Beneficiaries	Number of people directly reached or served
Description	Free-text narrative of what was done, observed, and achieved
Photo	Thumbnail of attached image (if any); click to view full size

4.2 Searching and Filtering Reports

Use the universal filter bar to narrow reports by project, state, worker, or date range. Use the search box (if present) to find reports containing specific keywords in the description.

4.3 Generating AI Reports from Field Data

Any filtered view of reports can be turned into a polished document in seconds. Click the **Content Hub** or **Generate Report** button on the Overview page.

1. Apply any desired filters (project, date range, worker, etc.).
2. Click **Generate Report** or open the **Content Hub**.
3. Choose a report type (Self, Team, Project, Impact, etc.).
4. Optionally add custom instructions or a focus area.
5. Click **Generate**. The AI drafts the report in ~15–30 seconds.
6. Review, edit, copy, or download as **Word (.docx)** or **PDF**.
7. Click **Save** to store the report in your organisation's library.

5. Content Hub & AI Report Generation

The Content Hub is FieldFlow's AI writing engine. It reads your filtered field data and produces publication-ready documents — no copy-pasting or manual formatting required.

5.1 Report Types

Report Type	Who Can Generate	Description
Self Report	Employee, Manager, Admin	Monthly activity report for an individual staff member — objectives, activities, outcomes, learnings, and next month plan.
Team Report	Manager, Admin	Aggregated monthly report for a manager's team — includes individual contribution table, collective impact, and team development needs.
Project Report	Manager, Admin	Deep-dive by project and area of intervention — cross-project comparisons, donor-ready narrative.
Organisational Report	Admin only	Executive-level board report covering the full organisation — national scale, all projects, Sopact-aligned structure.
Impact Report	Employee, Manager, Admin	Human-focused narrative quantifying beneficiary reach with case study narratives.

5.2 Content Types

Content Type	Who Can Generate	Description
Story	Manager, Admin	Mines field data for the single most powerful human interest story using the Nonprofit Storytelling Conference framework.
Video Overview	Manager, Admin	Frame-by-frame video script with visual descriptions, scene duration, and narration — integrates with Google Drive media.
Study Guide	Manager, Admin	Educational resource for partners and donors — learning objectives, key takeaways, comprehension questions.
Audio Overview	Manager, Admin	Podcast / audio narrative script optimised for remote audiences with limited internet.

5.3 Social Media Posts

Generate platform-optimised social posts from your field data with the Social Post generator.

Option	Choices
Platform	Instagram, Facebook, X / Twitter, LinkedIn
Tone	Inspiring, Celebratory, Professional, Urgent
Output	Post text + suggested hashtags + call-to-action + photo carousel from field attachments

5.4 Saved Reports Library

Every generated report can be saved to your organisation's library. Access it from **Settings** → **Saved Reports**.

Action	How To
Save report	Click Save button after generation
View saved	Settings → Saved Reports → click any card
Download	Click the download icon → choose Word or Text
Copy to clipboard	Click the copy icon on any saved report card
Delete	Click the trash icon (cannot be undone)

6. AI Notebook (Research Workspace)

The Notebook is a three-panel AI research workspace where you can load field data as "sources", ask questions in a chat, and compile a structured output document — all in one screen.

6.1 Three-Panel Layout

Panel	Purpose	Key Actions
Left — Sources	Load the data the AI will reason about	Add reports, add filtered sets, drag to reorder, remove source
Centre — Chat	Conversational AI that reasons over your sources	Type a question, use starter prompts, stream response in real time
Right — Output	Auto-compiled document as you chat	Copy as markdown, download, export to Word (.docx)

6.2 Starter Prompts

Click any of these to get an instant analysis:

- Summarise recent field activity
- What patterns appear across the data?
- Identify the top challenges faced by field staff
- Which project has the highest beneficiary reach?
- What recommendations can you make from this data?

6.3 On Mobile

On smaller screens, the three panels collapse into a single view with a bottom tab bar: **Sources | Chat | Output**. Switch between tabs to access each panel.

7. Impact & Theory of Change Analysis

The Impact tab and ToC Analysis tab use AI to extract outcome evidence from your field reports and map it against a Theory of Change framework.

7.1 Impact Dashboard Sections

Section	Description
Theory of Change Distribution	Bar chart showing how many field entries relate to each ToC level: Activity → Output → Outcome → Impact
Quantitative Evidence	Key numerical insights extracted from the data — beneficiary counts, income changes, training completions
Change Pathway Narrative	AI-written story of how activities are creating outcomes, based on the field evidence
Common Themes	Recurring topics and keywords across field descriptions
Top Barriers	Obstacles mentioned by field staff with severity levels (High / Medium / Low)
Learnings & Recommendations	What worked, what to improve, and suggested next steps
Breakdowns by Area/Project/State/Month	Bar charts and tables showing distribution of impact indicators

7.2 Using the Impact Tab

1. Apply date range and project filters in the filter bar.
2. Navigate to the **Impact** tab in the sidebar.
3. Scroll through each section — charts load as data is analysed.
4. To generate a full Impact Report document, click **Generate Report** from any tab.

8. Analytics & Performance Review

The Analytics tab provides per-worker and team-level performance metrics. Managers and Admins use this to identify high performers, gaps in coverage, and field-team consistency.

8.1 Worker Scorecard Metrics

Metric	Definition
Report Submission Rate	Reports submitted ÷ working days in period
Photo / Documentation Rate	% of this worker's reports that include a photo
Average Beneficiaries	Mean beneficiaries per report for this worker
Field Days Frequency	How often (per week) this worker submits
Primary Areas	Top areas of intervention by count
Associated Projects	Projects this worker has reported under
Reporting Consistency	Week-over-week repeat rate — are they reporting regularly?

8.2 Team-Level Trends

At the top of the Analytics tab, team aggregate views show:

- Total active workers in the period
- Reports per worker — distribution histogram
- Outreach per worker
- Top performers leaderboard
- Geographic distribution — state-wise and area-wise worker deployment

9. WhatsApp Platform

FieldFlow includes a full WhatsApp Business Cloud API integration. Admins can build automated chatbot flows, view live conversations, manage contacts, and send broadcasts — all from the WhatsApp tab.

9.1 Overview Tab

The WhatsApp Overview shows six live statistics:

Stat Card	Description
Contacts	Total unique WhatsApp contacts who have messaged your number
Inbound Messages	Messages received from contacts
Outbound Messages	Messages sent by the platform (bot + agent)
Active Flows	Published flows currently accepting trigger keywords
Active Sessions	Contacts in the middle of a flow conversation right now
Completed Sessions	Total finished flow journeys

9.2 Conversations Tab

A Glific-inspired two-panel view for live agent monitoring and manual messaging.

Left Panel — Contact List

- Search contacts by name or phone
- Filter by status: All / ■ Active Bot Session / ■ Opted-in
- Each row shows: name, phone, last message preview, time ago, active flow badge

Right Panel — Conversation View

- WhatsApp-style chat bubbles — inbound messages on the left, outbound on the right
- Bot messages in purple, manual agent replies in teal
- Session status bar shows: current flow name, current node, time in session
- **Stop Bot** button — removes the active session so an agent can take over
- **Tags** — add or remove contact labels directly from the conversation header
- **Collected Fields** — view data saved by the bot (name, village, answers, etc.)
- **Compose box** — type a message and press Enter to send as agent reply (Shift+Enter for new line)

■ *Conversations auto-refresh every 20 seconds. New messages appear without reloading.*

9.3 Flows Tab

Flows are automated conversation trees triggered by keywords. The Flows tab lists all your flows with status and actions.

Column / Badge	Description
Flow Name	Name you gave the flow
ACTIVE badge	Green = published and accepting triggers. Grey = draft, not active.
DEFAULT badge	Blue = this flow runs when no specific keyword is matched
Nodes count	Number of steps in the flow
Trigger keywords	Keywords that start this flow (e.g. "hi", "hello", "report")
Updated date	Last time the flow was edited

Flow Actions

Button	Action
■ Simulate	Open the built-in simulator to test the flow without sending real messages
■ / ■ Toggle	Activate (publish) or deactivate (pause) the flow
⇒ Edit	Open the Flow Builder to modify nodes and connections
■ Delete	Permanently remove the flow (asks for confirmation)
■ Templates	Open the template gallery to start from a pre-built flow
+ New Flow	Create a blank flow from scratch

9.4 Flow Builder — Mind-Map Editor

The Flow Builder is a visual canvas editor where you drag, connect, and configure nodes to build your chatbot conversation. It works like a mind-map — nodes are cards on an infinite canvas connected by arrows.

Canvas Controls

Action	How To
Pan canvas	Click and drag on empty canvas space
Zoom in / out	Scroll wheel, or use the + / - controls in the bottom-left
Add a node	Click the purple + Add Node button at the bottom centre
Select a node	Click any node card — the right panel opens for editing

Action	How To
Move a node	Click and drag the node card to reposition it
Connect nodes	Drag from the bottom handle (circle) of one node to the top handle of another
Delete a node	Select it, then press the Delete key, or click the trash icon in the right panel
Delete an edge	Click the edge (arrow) to select it, then press the Delete key
Mini-map	Bottom-right corner — shows all nodes; click to navigate

Node Types Reference

Node Type	Icon	Purpose	Key Fields
Send Message	■	Send a plain text message	Message text (supports {{variable}} placeholders), Next node
List Selection	■	Interactive scrollable list (up to 10 options)	Header, Body text, Section title, Options (id, title, description), Save as, Next node
Button Choice	■	Up to 3 quick-reply buttons	Body text, Buttons (up to 3, 20 chars each), Save as, Next node
Wait for Input	— ■	Wait for the user to type a free-text reply	Prompt text, Save as (variable name), Validation (text/number/phone), Next node
Condition	■	Branch based on a variable's value	Variable, Operator (equals/contains/starts_with/not_empty/is_number), Value, Next if TRUE, Next if FALSE
Webhook Call	■	Call an external API and store the response	Method (POST/GET), URL, Request body (key-value), Headers, Next on success, Next on error
Set Variable	■	Store a fixed value in a contact field	Field name, Value (literal or {{variable}})
Delay / Wait	■ ■	Pause before continuing	Duration in seconds (1–3600)
Add Label	■ ■	Tag the contact with a label/collection	Label name
Enter Sub-Flow	■ ■	Transfer contact to a different flow	Sub-flow name
End Flow	■	Close the session	Optional farewell message

Connecting Nodes

Each node has a **target handle** (grey circle at the top) and one or more **source handles** (coloured circles at the bottom). Drag from a source handle to a target handle to create an arrow.

Handle Colour	Node Type	Meaning
Grey	All regular nodes	Default next node
Green ■	Condition, Webhook	TRUE path / Success path
Red ■	Condition	FALSE path
Amber ■■	Webhook	Error path (API call failed)

Variable Placeholders

In any text field, use `{{variable_name}}` to insert data collected earlier in the flow. FieldFlow also provides built-in contact variables:

Placeholder	Value
<code>{{contact.name}}</code>	The contact's display name (from WhatsApp profile)
<code>{{contact.wa_id}}</code>	The contact's WhatsApp phone number
<code>{{your_variable}}</code>	Any value saved by a Wait for Input, List, or Button node
<code>{{webhook_key}}</code>	A key from the last Webhook response JSON

Saving and Publishing a Flow

1. Set the **Flow Name** in the toolbar (top-left input).
2. Add **Trigger Keywords** (comma-separated) — e.g. "hi, hello, start".
3. Build your node graph on the canvas.
4. Click **Save Flow** (purple button, top-right).
5. Back in the Flows list, click the ■ **Activate** button to publish it.
6. The flow will now respond to incoming WhatsApp messages that match your keywords.

9.5 Flow Templates

Click **Templates** in the Flows header to open the pre-built template gallery. Select a template to pre-fill a new flow — you can edit everything after loading.

Template	Tags	Description
Welcome & Registration	onboarding, registration	Greets new contacts, shows a main menu, and routes to sub-flows
Field Report Collection	field, reporting	8-node flow collecting village, beneficiaries, activity type, description, and submitting via webhook

Template	Tags	Description
Beneficiary Survey	survey, feedback, M&E;	Satisfaction rating, income change, and open comment collection
Opt-out Handler	compliance, opt-out	Handles STOP / unsubscribe keywords, marks contact as opted out
Quick Poll / Quiz	poll, quiz, engagement	3-button single-question poll with label tagging

9.6 Flow Simulator

Click the green **Simulate** button on any flow card (or inside the builder) to test your flow without sending real WhatsApp messages.

Simulator Feature	Description
Chat preview	See exactly what messages the contact will receive at each step
Button / List interaction	Click buttons and list options as if you were the contact
Free-text input	Type your own text to test Wait for Input nodes and condition branches
Variable display	Watch variables fill in as the conversation progresses
Reset	Start the flow from the beginning at any time

9.7 Contacts Tab

All WhatsApp contacts who have ever messaged your number are stored here.

Column	Description
Avatar / Initial	Auto-generated coloured avatar based on phone number
Name	Contact's WhatsApp display name (or phone number if no name)
Phone (wa_id)	WhatsApp phone number in international format
OPT-IN badge	Green badge if the contact has opted in to receive messages
Message count	Total messages exchanged with this contact
Tags	Labels applied by flows or agents (shown as coloured pills)

Click any contact to open a side drawer showing their full message history and all data fields collected by flows.

9.8 Broadcast Tab

Send a message to multiple contacts at once — useful for announcements, reminders, and campaigns.

1. Go to WhatsApp → **Broadcast** tab.
2. Choose recipients: **All contacts**, **By label/tag**, or **By opt-in status**.
3. Compose your message (text, template, or media).
4. Choose **Send Now** or set a scheduled time.
5. Click **Send Broadcast**. Delivery status is tracked per contact.

Broadcast Best Practices

- Only send to opted-in contacts to comply with WhatsApp Business Policy.
- Use approved message templates for outbound-initiated messages.
- Keep message frequency reasonable — avoid daily broadcasts.
- Monitor delivery and read rates in the broadcast report.

9.9 WhatsApp Settings

Configure your WhatsApp Business API connection. These settings must be completed by an Admin before any WhatsApp features will work.

Setting	Where to Get It	Description
Phone Number ID	Meta Business Manager → WhatsApp → Phone Numbers	The numeric ID of your registered WhatsApp Business phone number
Business Account ID	Meta Business Manager → Business Settings → WhatsApp Accounts	Your WhatsApp Business Account (WABA) ID
Access Token	Meta Business Manager → System Users → Generate Token	A permanent "System User" token with whatsapp_business_messaging permission
Webhook Verify Token	FieldFlow Settings → WhatsApp	A secret string you set; enter the same value in the Meta Webhook configuration

■ Use a System User token (not a personal token) — it never expires. Personal tokens expire every 60 days.

10. Settings & Administration

The Settings tab is only visible to Admins. It is the control panel for your organisation — managing users, projects, permissions, AI behaviour, and more.

10.1 User Management

Viewing the User Directory

The user list shows every team member with:

- Name, email, phone
- Role badge (Admin / Manager / Employee)
- Report count and total beneficiaries (last 90 days)
- Last active date
- States worked in

Adding a New User

1. Click **+ Add User**.
2. Enter: Name, Phone (10-digit Indian mobile), Role, Manager (for Employees), State.
3. Set a temporary password (user can change it on first login).
4. Click **Save**. The user can now log in immediately.

Editing a User

Click the edit (≡) icon on any user card to update name, role, manager assignment, state, or projects.

Deactivating a User

Toggle the **Active** switch to deactivate a user. They will no longer be able to log in, but their report history is preserved. Deactivated users appear in grey in the user list.

Merging Duplicate Users

If the same field worker has submitted reports under two different phone numbers, click **Merge Duplicate** and select the secondary phone to consolidate. All reports from the secondary record are moved to the primary and the duplicate is removed.

10.2 Projects

Projects are the top-level grouping for field reports. Every report must belong to a project. Admins manage the project master list here.

1. Go to **Settings** → **Projects**.

2. Click **+ Add Project**.

3. Enter a Project ID (lowercase, no spaces — e.g. "wetland_odisha") and Display Name.

4. Choose a colour for visual distinction in charts and filters.

5. Click **Save**.

■ The recommended naming format is: Donor_Programme_Location (e.g. "TA_WetlandRestore_Odisha").

10.3 Tab Access Control

Control which tabs each role can see in the sidebar. You can also override access for specific users.

Tab	Default: Employee	Default: Manager	Default: Admin
Overview	■	■	■
Reports	■	■	■
Media	■	■	■
Impact	■	■	■
ToC Analysis	■	■	■
Analytics	■	■	■
Notebook	■	■	■
WhatsApp	■	■	■
Settings	■	■	■

To override for a specific user: enter their phone number in the "User Override" field, adjust the toggle switches, and click Save.

10.4 Content Hub Permissions

Control which roles can access each AI content generation feature.

Content Feature	Default: Employee	Default: Manager	Default: Admin
Self Report	■	■	■
Team Report	■	■	■
Project Report	■	■	■

Content Feature	Default: Employee	Default: Manager	Default: Admin
Org / Board Report	■	■	■
Impact Report	■	■	■
Story	■	■	■
Social Post	■	■	■
Video / Audio Script	■	■	■

10.5 AI Prompts

Customise the instructions that govern how the AI generates content for your organisation. Changes here affect all users in your organisation.

Prompt	Purpose
System Prompt	Global instruction block prepended to every AI request — defines your organisation's voice, rules, and data accuracy constraints
Report Templates	Type-specific instructions for each report format (Self, Team, Impact, etc.)
Story Template	Framework and structure for human-interest story generation

■ Changes to AI prompts are versioned. Click "Roll Back" next to any version to restore a previous prompt.

10.6 AI Intelligence Panel

The AI Intelligence panel (Admin only) gives visibility into AI performance, cost, and quality control.

Section	Description
Provider Health	Live status of Gemini AI — response time and error rate over the last 24 hours
7-Day Cost Breakdown	Total API requests, estimated cost in USD, and provider split by day
Learning Candidates	Field data patterns the AI suggests adding as org-level memories — Approve or Reject each one
Rules	Versioned configuration rules that govern AI behaviour — click Rollback to revert to any previous version

11. Role & Permission Reference

This section summarises what each role can and cannot do across the platform.

Feature / Action	Employee	Manager	Admin
View Overview dashboard	■	■	■
View own field reports	■	■	■
View all team reports	■	■	■
Generate Self Report	■	■	■
Generate Team / Project Report	■	■	■
Generate Org / Board Report	■	■	■
Generate Social Post	■	■	■
Access AI Notebook	■	■	■
View Impact / ToC tabs	■	■	■
Manage WhatsApp flows	■	■	■
View WhatsApp conversations	■	■	■
Send WhatsApp broadcasts	■	■	■
Add / edit users	■	■	■
Manage projects	■	■	■
Configure tab / content permissions	■	■	■
Edit AI prompts	■	■	■
View AI cost & intelligence panel	■	■	■
View billing	■	■	■ (Superadmin)

12. Troubleshooting & FAQs

Q: I see "Not configured — go to Settings" on the WhatsApp tab.

A: Your WhatsApp credentials have not been entered yet. Go to WhatsApp → Settings and enter your Phone Number ID, WABA ID, and Access Token. See Section 9.9 for details.

Q: My field reports are not appearing on the dashboard.

A: Check that the date range filter includes today. Also verify that the phone number used to submit matches a registered user. Reports sync within 60 seconds of submission.

Q: The AI is taking a long time to generate a report.

A: Large date ranges with many reports take longer. Try narrowing the date range or applying a project filter to reduce the data volume. Typical generation time is 15–30 seconds.

Q: A WhatsApp flow is not triggering when I send the keyword.

A: Check that the flow is set to ACTIVE (green badge). Verify the keyword is in the trigger list with exact spelling (case-insensitive). Ensure your phone number's WhatsApp subscription is active in Meta Business Manager.

Q: I cannot see a tab that another team member can see.

A: Tab visibility is role-based. Ask your Admin to grant access in Settings → Tab Access.

Q: The Broadcast tab shows a "not configured" error.

A: WhatsApp must be fully configured (credentials + webhook) before broadcasts can be sent.

Q: I accidentally deleted a flow.

A: Deleted flows cannot be recovered. Recreate it from a template or from scratch. Consider downloading flow configurations as backups before deleting.

Q: How do I add a new field worker?

A: Go to Settings → User Management → Add User. Enter their name, phone, and role. They can log in immediately after being added.

Q: A contact's bot session is stuck — they are not receiving messages.

A: Go to Conversations, find the contact, and click "Stop Bot" to end their session. They can then start a new flow by sending a trigger keyword.

Q: The generated report has wrong names or incorrect details.

A: The AI uses the data in the field reports exactly as submitted. If names or projects are wrong, the underlying field entries need correction. Ask your Admin to update the AI Prompt rules to enforce stricter data accuracy.

Appendix A — Keyboard Shortcuts

Shortcut	Action	Where It Works
Enter	Send message	Conversations compose box
Shift + Enter	New line in message	Conversations compose box
Delete	Remove selected node or edge	Flow Builder canvas
Scroll wheel	Zoom in / out on canvas	Flow Builder canvas
Click + Drag (canvas)	Pan around the canvas	Flow Builder canvas

Appendix B — Variable Placeholder Reference

Placeholder	Source	Example Value
{{contact.name}}	WhatsApp profile name	Ramesh Kumar
{{contact.wa_id}}	Phone number (no + prefix)	919876543210
{{user_name}}	Wait for Input → save_as	Priya
{{village}}	Wait for Input → save_as	Khairatpur
{{beneficiaries}}	Wait for Input → save_as	24
{{activity_type}}	List or Button → save_as	training
{{webhook_status}}	Webhook response JSON key	success

Appendix C — Glossary

API

Application Programming Interface — a way for two software systems to communicate.

WABA

WhatsApp Business Account — your registered Meta/WhatsApp business entity.

Flow

An automated chatbot conversation tree in FieldFlow's WhatsApp Platform.

Node

A single step in a WhatsApp flow (e.g. Send Message, Wait for Input).

Session

An active conversation between a contact and a WhatsApp flow.

Opt-in

A contact's explicit consent to receive automated WhatsApp messages from you.

Webhook

An HTTP callback — FieldFlow can call your backend URL when a flow collects data.

JSONB

A PostgreSQL data type for storing structured JSON data efficiently.

ToC

Theory of Change — a framework linking activities to outcomes and impact.

Gemini

Google's AI language model used by FieldFlow for report and content generation.

Firebase

Google's authentication service used for user login in FieldFlow.

Neon

The cloud PostgreSQL database provider used to store all FieldFlow platform data.
